**Report****Abstract of EP0950474**

The adapter device comprises a new interchangeable locking button (2) able to be fixed on the right of the handle for the use of left handers. The locking button is placed in a threaded housing and is held on a spindle which is advanced and reversed by the means of an oblong. The handle comprises a tapping (4) passing right through able to receive either the locking button or the threaded button (3).
